COVID-19 GLOBAL IMPACT ANALYSIS

Project Overview

This project analyses the impact of COVID-19 in India, the United States, and the United Kingdom using historical data from Our World in Data (OWID). The analysis focuses on reported cases, deaths, and vaccination figures.

Country-wise Statistics

Country	Total Cases	Total Deaths
India	45.04 million	533,623
United Kingdom	24.97 million	232,112
United States	103.44 million	1,193,165

Key Findings

1. The United States recorded the highest total cases and deaths among the three countries.

2. India experienced its highest monthly new cases and deaths in May 2021.

3. The USA and UK recorded their highest monthly new cases in January 2022.

4. Monthly reported deaths generally declined after 2022 across all three countries.

5. Vaccination data shows substantial reported vaccination coverage in all three countries.

Conclusion

The analysis highlights differences in the COVID-19 impact across the three countries. The USA had the highest reported cumulative cases and deaths, while India experienced a major wave in May 2021. The charts help identify trends over time and compare the countries.
